Stormwater Management for Oil and Gas Operations

Price: **\$0.00** | Type: **Online, Webinar**
Course Length: **1 hour** | Credits: **1 PDHs**

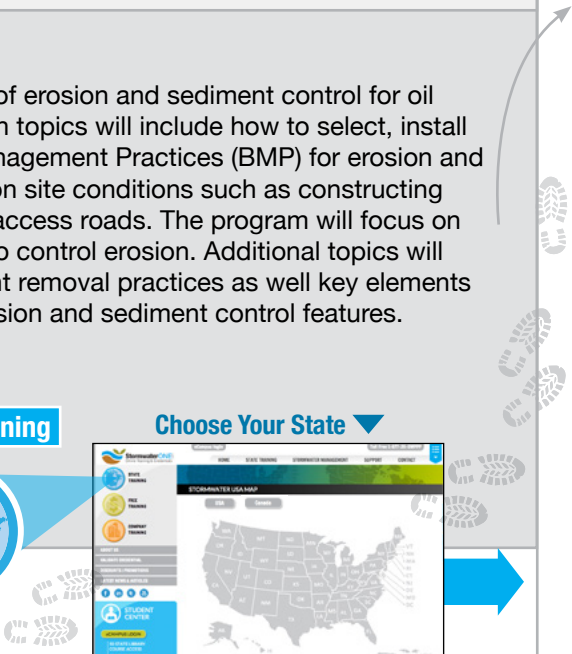

Course Overview

This webinar will cover the basics of erosion and sediment control for oil and gas operations. The discussion topics will include how to select, install and maintain appropriate Best Management Practices (BMP) for erosion and sediment control based on common site conditions such as constructing a well pad location, pipelines and access roads. The program will focus on effective preventative techniques to control erosion. Additional topics will include how to implement sediment removal practices as well key elements of conducting an inspection of erosion and sediment control features.
