326	WDL-66 RM	WDL-66 RM Series (102" Wide)	6600 lb.

WDL PLATFORM and LINKAGE

Common Features

- Capacity decal: 3500, 4500, 5500, and 6600 pounds
- Sizes: 42", 60", 72" and 86" deep
- 80" and 86" wide
- Ramp: 15" fixed, 16" folding aluminum, 12" folding steel
- Chain linkage support (Two piece platforms)
- Bar Linkage support (One piece platforms)
- Cylinder closing with closure hub

WDL - 15" ramp

WDL MAIN FRAME and RUNNER ASSEMBLY

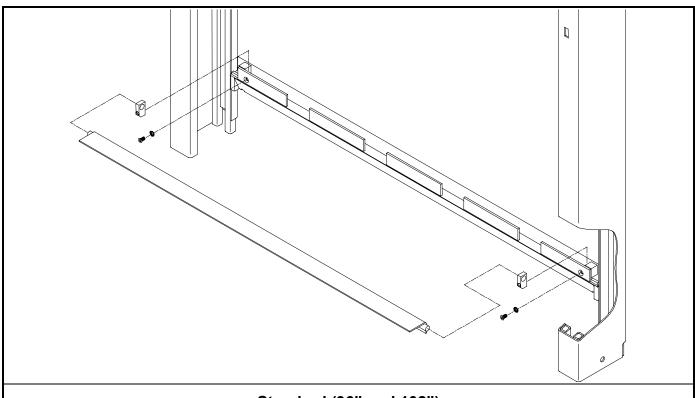

Common Features

- Capacity: 3500, 4500, 5500, and 6600 pounds
- Cylinder closing with closure hub ◆
- Dual lifting cylinders mounted vertically
- Formed channels for cylinders and runners
- Spec tag on rail
- Options available: Bottom Stops, Store Below Bed
- Threshold Extension (crossbeam with flip-up plate) option (see following page for more information).

Standard (96" and 102")	Bottom Stops (96" and 102")	Store Below (96" and 102")
PM-294 Built thru 10/98	Contact Waltco for liftgates built prior to 9/94	PM-386 Built thru 10/98
PM-475 Built from 10/98 thru 1/02	PM-385 Built from 9/94 thru 10/98	PM-477 Built from 10/98 thru 1/02

WDL-SERIES HYDRAULICS & CONTROLS

Common Features

- Power up/Gravity down (standard)
- Power up/Power down (Special contact Engineering for assistance)
- Cylinder closing
- Controls on Curb Side

WDL Series – Push Button control

Built thru 10/98

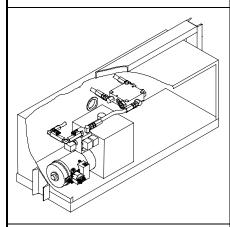

If Built prior to 3-95 see Note 2 below

WDL RM Series – Super Switch control. Pump is in an enclosure with a hinged front door

Built from 10/98 thru 1/01

WDL RM Series – Super Switch control. Pump is in an enclosure with a removable cover

Built from 1/01

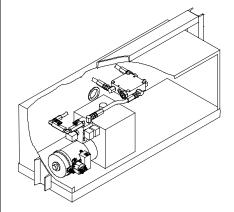

Liftgate Hydraulic and Single Pump Hydraulic Layout PM-350

Single Pump w/ Hand Pump Hydraulic Layout PM-384

NOTES:

- We have built several different SP pump enclosures over the years for different customers. When ordering enclosure parts (Doors, latches etc) it is important to have the customer measure the overall size of his current enclosure to be sure you get the correct parts.
- 2. Refer to Tech Tip TT970001 when customer wants to order a closer cylinder for liftgates built prior to 4/1/95.

11	75085005	1	Hex Nut, 3/8"-16, Serrated
12	75088081	5	Lock Washer, 3/8"
13	70401650	1	Hand Pump Kit (Hand Pump Option Only)
14	31591001	1	Hydraulic Enclosure Cover (Direct Power Only)
	31691001	1	Hydraulic Enclosure Cover (Aux. Batteries Only)
15	75089572	1	Plastic Plug, 1-3/8" Hole
16	75083094	2	Hose Assy, 3/8" ID x 18-1/2" x 9/16"-18 37° Flare Fem.
17	75086055	5	Hex Bolt, 3/8"-16 x 3/4", Grade 5
18	75082874	1	Brass Insert (For Compression Adapter)
19	75088051	2	Flat Washer, 1/4"
20	75089243 ^A	1	Circuit Breaker, 150 Amp
21	10099500	2	Terminal Strip
22	75085003	4	Hex Nut, 5/16"-18, Serrated
23	75086217	2	Hex Bolt, 5/16"-18 x 1-1/4" lg.

ITEM	PART NUMBER	QTY	DESCRIPTION
24	75089769	1	Key Switch Cap
25	75000030	1	"O" Ring
26	75089782	1	Key Switch
27	75080062	3	Wire Clip
28	31491401	1	Wire, Key Switch Control
29	10195536	1	Battery Cable Assy, 36"
30	75082873	1	Delrin Sleeve (For Compression Adapter)
31	75086707	5	Screw, #10-32 x 5/8" lg.
32	85803482	2	Holder, Spring Clip (Hand Pump Option Only)
33	75085000	5	Hex Nut, #10-32, Serrated
34	31491201	1	Wire, Key Switch Control
35	75089853	1	Fuse, 5 Amp
36	75086011	2	Hex Bolt, 1/4"-20 x 2" lg.
37	75085161	2	Nylon Locknut, ¼"-20
38	70400854	1	Motor/Solenoid Assy
39	70092503	2	Valve Assembly 2-Way/ 2-Position Solenoid Coil Valve
40	70092501	1	Valve Assembly 3-Way/ 2-Position Solenoid Coil Valve
41	70401500	1	Hydraulic Pump Unit – Single Pump
42	85803921	1	Relay
43	31491902	1	Liftgate Wiring Harness
	31494601	1	Trailer Extension Harness (Trailer Kits Only)
44	31491803	1	Motor Wiring Harness
45	75082877	1	Elbow, 90°, ¼" NPT x ¼" Compression
46	75082867	1	45° Bulkhead Elbow, 9/16"-18 37° Flare Male
47	10099501	1	Terminal Strip (90° formed)
48	70401651	1	Hand Pump Handle (included with Item 13)
49	75085093	1	Hex jam nut, 5/16"-18.

^A Included in Circuit Breaker Replacement Kit 80000912.

WDL-SERIES PUMPS & CYLINDER Parts Drawings

If unsure of the correct pump or cylinder part number, click here.

QUICK TIP:

Most pumps have a pump pressure decal on them that also includes the pump part number. This number will always be an 8-digit part number. If still unsure, please contact Waltoo for assistance.

CYLINDERS

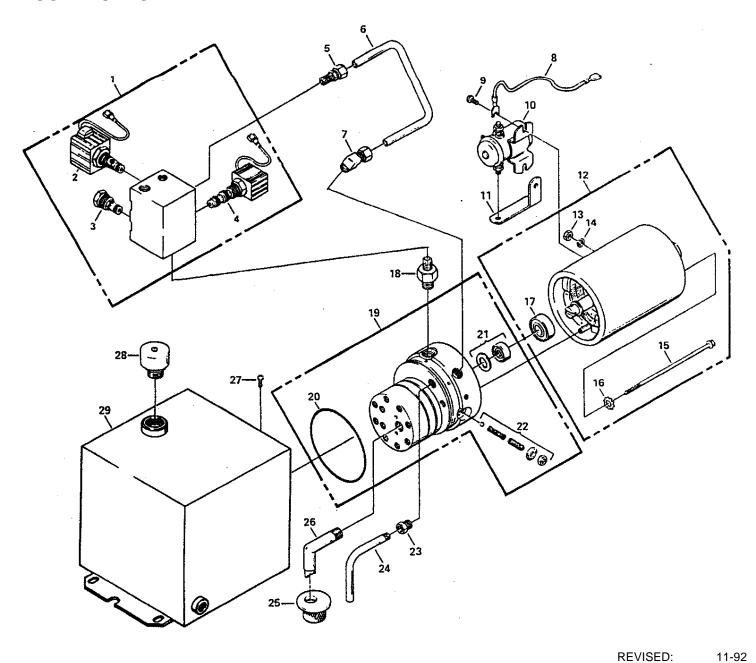

Part Number	Description	PM No.
32680050	Lift Cylinder	PM-327
32680051	Lift Cylinder	PM-327A
32480010	Closer Cylinder	PM-326
32480011	Closer Cylinder	PM-326A
32480012	Closer Cylinder	PM-326B

Date: 3-5-97 No. TT960014 Model: RGL/WDL EO No. n/a

SUBJECT: Ground Cable for Hydraulic Enclosures with a Slide Out Tray.

Effective immediately, all WDL and RGL liftgates that have a Hydraulic Enclosure with a Slide Out Tray, must include a Ground Cable from the side of the Enclosure to either the Slide Out Tray or the negative terminal of one of the Auxiliary Batteries (see diagrams below).

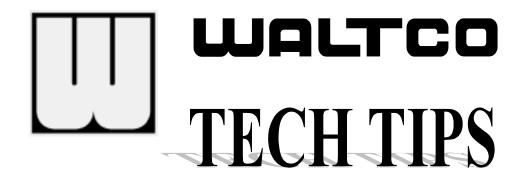

This cable must be a minimum 2 Ga. cable, We recommend and can provide a 2 ga. x 18" lg. Battery cable. The 18" length allows the tray to be pulled out when accessing the Hydraulic unit for servicing or any other reason.

This Cable is required to achieve an adequate ground for the charging system for the Auxiliary Batteries. Without this Ground Cable, there is insufficient contact between the tray and the enclosure to provide a reliable ground for charging of the Auxiliary Batteries.

Normal operation of the pump unit causes the auxiliary batteries to discharge as they are used (this is normal and expected). An unreliable ground can prevent the Auxiliary Batteries from being properly recharged, which causes low voltage. Operating the pump unit with low voltage can damage the Motor Solenoid and eventually can cause the Motor Solenoid to stick or freeze in the "On" position. This can then cause the Pump Motor to run continuously until it overheats and burns out.

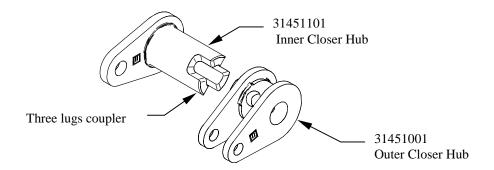

Liftgates in the field that do not have a ground cable from the side of the Enclosure to either the Batteries or the Slide Out Tray, should be reworked, as shown in either of the diagrams above, as soon as possible.

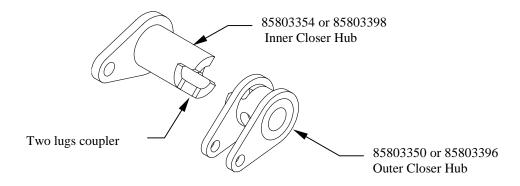

Date: 3-14-97 No. TT970001 Model: WDL EO No. 3047C

SUBJECT: New three lug cast steel Closer Hubs for WDL Series liftgates.

All models of the WDL series liftgates manufactured after 3-14-97, will have the new cast steel three lug Outer Closer Hub (31451001) and Inner Closer Hub (31451101), as shown below. The new Closer Hubs were released into production by E.O. 3047C. In addition, the new Closer Hubs will be provided as service parts as detailed in "*EFFECT ON SERVICE PARTS*".

New three lug cast steel Closer Hubs

Replaces Machined two lug Closer Hubs

The new Outer and Inner Closer Hubs are made from high strength cast steel. The Inner Closer Hub is heat treated to provide improved crack resistance and wear properties.

TT970015.doc 1

EFFECT ON SERVICE PARTS

- 1. The "WDL Series Closer Hub and Closer Cylinder Replacement Kit (80000654)" has been revised to include the new cast steel Outer Closer Hub (31451001) and Inner Closer Hub (31451101) and will be available after 3-14-97.
- 2. For *units manufactured after 3/21/95 and prior to 3-14-97*, the new cast steel Outer Closer Hub (31451001) and Inner Closer Hub (31451101) *can only be provided as a set* for replacement of the old Outer Closer Hub (85803399) and Inner Hub (8580394).
- 3. For *units updated since 3/21/95 and prior to 3-14-97* with the "WDL Series Closer Hub and Closer Cylinder Replacement Kit (80000654)" Rev. 01, the new cast steel Outer Closer Hub (31451001) and Inner Closer Hub (31451101) *can only be provided as a set* for replacement of the old Outer Closer Hub (85803399) and Inner Hub (8580394).
- 4. For *units manufactured prior to 3/21/95 that have not been updated*, the new cast steel Outer Closer Hub (31451001) and Inner Closer Hub (31451101) *can only be provided as a set* in the "WDL Series Closer Hub and Closer Cylinder Replacement Kit (80000654)" Rev. 02
- 5. For units manufactured after 3-14-97 or updated with "WDL Series Closer Hub and Closer Cylinder Replacement Kit (80000654)" Rev. 02, the new cast steel Outer Closer Hub (31451001) and Inner Closer Hub (31451101) can be provided as individual parts.

TT970015.doc 2

Date: 4-16-99 No. TT990028 Model: WDLRM EO No. 3393

Subject: Reduced Maintenance WDL Series liftgates.

All models of the WDL and WDLBG (Now referred to as WDL RM and WDLBG RM) Series liftgates sold after 10-1-98 have incorporated reduced maintenance features including replacement of grease fittings with greaseless TeflonTM composite bearings at critical wear points throughout the liftgate. In addition, TeflonTM composite bearings have been added to the Platform Extension Hinges.

In addition to the reduced maintenance features there have also been several other improvements to the WDL RM and WDLBG RM Series liftgates:

- 1. Converted all electrical switches from Push Button control to the new SuperswitchTM.
- 2. Replaced the "Pusher Pin" platform opening assist with two torsion springs which provide opening assist throughout the first 45° of the platform opening.
- 3. Changed the method of routing and mounting of all hoses and electrical wires in the liftgate for easier assembly.
- 4. Added Tees at the bottom of the uprights to provide the customer with two different routing options for the hoses running from the liftgate to the Hydraulic Enclosure.
- 5. Added a Bleeder Port to the top of the lift cylinders to ease bleeding of the hydraulic system.
- 6. Added Fluid Return Lines from the top of the Lift Cylinders to the Hydraulic Reservoir.

EFFECT ON SERVICE PARTS:

A. New will work for old – no rework or additional parts required:

- 1. New Roller Assemblies (31439501) can replace old (85803392).
- 2. New Cylinder Pins (31471501 & 31470501) can replace old (85803345 & 85803343).
- 3. New Closer Cylinder (32480012) can replace old (32480011).
- 4. New Transit Latch Assemblies can replace old:

New P/N	Old P/N	Description
31333501	85803250	Curb Side Transit Latch Assembly (1 Pc. Platforms)
31333551	85803251	Street Side Transit Latch Assembly (1 Pc. Platforms)
31433501	85803244	Curb Side Transit Latch Assembly (2 Pc. Platforms)
31433551	85803245	Street Side Transit Latch Assembly (2 Pc. Platforms)

5. New Inner Hubs can replace old (Outer CS hub did not change part numbers).

New P/N	Old P/N	Description
31451102	31451101	Curb Side Inner Hub
31451301	85803358	Street Side Hub

B. New will work for old – no rework but additional parts are required:

- 1. New Roller Pin Assemblies (31439001) can replace old (85803393) if new rollers (31439501) are ordered at the same time.
- 2. New Street Side Runner Assemblies can replace old but several new parts will also be required. The new runners must include the complete Transit Latch assembly (refer to appropriate PM drawing for part numbers), a new Street Side Hub (31451301), and a new Main Platform Pin (31411201).

New P/N	Old P/N	Description
31330051	85803796	Runner Assembly Complete, DS, 1 Pc. Platforms
31430051	85803780	Runner Assembly Complete, DS, 2 Pc. Platforms
31530051	85803368	Runner Assembly Complete, DS, 2 Pc. Platforms w/ Bottom
		Stops
32430051	85803782	Runner Assembly Complete, DS, 2 Pc. Platforms w/ Store
		Below Option (60" BE Platforms only)
32530051	85803315	Runner Assembly Complete, DS, 2 Pc. Platforms w/ Store
		Below Option (60" + 15" & 72" BE Platforms only)
31230051	31235051	Runner Assembly Complete, DS, WDLBG

C. New will work for old – but rework and additional parts are required:

- 1. New Lift Cylinders (32680051) can replace old (32680010) only if both cylinders are replaced and a Return Line Kit (No number at this time) is added to the liftgate.
- 2. New Torsion Springs (31437101 and 31437151) can replace the old Pusher assembly with some rework to the Runners and the Platform as follows:
 - The Platform must be reworked to have two (2) spring stops (31417801) and the platform stop angle (31417501) added to accommodate the new Torsion Springs.
 - The Street Side Runner must be reworked to have the grease fitting (75089303) on the Inner Bearing Tube moved to a new location to accommodate the new Torsion Spring.
 - The Curb Side Runner must be reworked to have the grease fitting (75089303) on the Inner Bearing Tube moved to a new location to accommodate the new Torsion Spring. The old Pusher Pin Assembly must also be removed and a new Platform Stop Angle with Rubber Stop Pad (31434601, 31434701, 31436801, 75086007 (2), 75088051 (2), 75085161 (2)) must be added to the Runner.
- 3. New Curb Side Runner Assemblies can replace old but several new parts and some rework of the platform and the Street Side Runner will be required. The new runner must include the following:
 - Complete Transit Latch assembly (refer to appropriate PM drawing for part numbers).
 - A new Curb Side Inner Hub (31451102) and Outer Hub (31451001).
 - A new Main Platform Pin (31411201).
 - New torsion springs for both curb side and street side (31437101 & 31437151).
 - A new curb side Runner Cover Plate (see New Will Not Work for old for appropriate part number).
 - A Raise/Lower SuperswitchTM (10099300) for the inside control switch.

- The Platform must be reworked to have two (2) spring stops (31417801) and the platform stop angle (31417501) added to accommodate the new Torsion Springs.
- The Street Side Runner must be reworked to have the grease fitting (75089303) on the Inner Bearing Tube moved to a new location to accommodate the new Torsion Spring.
- The Inside Control Cable/Closer Hose Assembly must be re-mounted to the top of the Curb Side Runner using new hose clamps (75083044 & 75082880) and nut and bolt (75086062 & 75085161). The Control cable must then be connected to the Raise/Lower Switch with three (3) 16 Ga. Butt Connectors (75082033).

New P/N	Old P/N	Description
31330001	85803794	Runner Assembly Complete, CS, 1 Pc. Platforms
31430001	85803779	Runner Assembly Complete, CS, 2 Pc. Platforms

- 4. New WDL RM One Piece Platforms or Two Piece Platforms Complete can replace old but several new parts and some rework of the runners will be required. The new Platform must include the following:
 - New torsion springs for both curb side and street side (31437101 & 31437151).
 - The Street Side Runner must be reworked to have the grease fitting (75089303) on the Inner Bearing Tube moved to a new location to accommodate the new Torsion Spring.
 - The Curb Side Runner must be reworked to have the grease fitting (75089303) on the Inner Bearing Tube moved to a new location to accommodate the new Torsion Spring. The old Pusher Pin Assembly must also be removed and a new Platform Stop Angle with Rubber Stop Pad (31434601, 31434701, 31436801, 75086007 (2), 75088051 (2), 75085161 (2)) must be added to the Runner.

75083093	85803917	Closer Cylinder Hose (Old cable was sold as an Assembly only)

E. Old Parts that will not work for new:

- 1. Old Runner Cover Plates will not work for new (see New Will not work for Old for Part numbers).
- 2. Old Main Deck Pins (85803129) cannot be used for new liftgates.
- 3. Old Runner Assemblies cannot be used for new liftgates (See New Will work for old with Additional Parts and Rework for part numbers.
- 4. Old Hydraulic Hoses and Steel Hydraulic Lines cannot be used on new liftgates (see New Will not work for Old for Part numbers).
- 5. Old Wiring Harnesses cannot be used on new liftgates (see New Will not work for Old for Part numbers).

Date: 3/12/00 No. TT000044 Model: WDL EO No. N/A

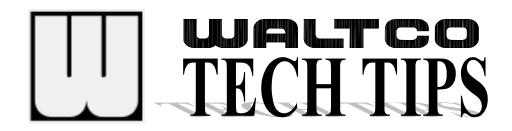

SUBJECT:

Proper bleeding procedure for the WDL RM series liftgates equipped with dual pumps.

The following bleeding procedure <u>must</u> be followed to assure that all air is removed from the Lift Cylinders on a WDL RM with dual pumps. If this procedure is not followed, air may remain trapped in the cylinders and wet lines, which will cause the erratic operation of the Flow Divider Valve and the Platform to raise unevenly. It is highly recommended that before attempting to adjust Flow Divider Valve, the system should be bled.

- Open the Platform and lower it to the ground.
- Check the oil level in the Hydraulic Reservoir. With the Platform open and lowered to the ground, the oil level should be with 1/2 inch of the top of the Reservoir. Add oil as may be required.
- Place the Motor Selector Switch in the "Auxiliary" position.
- Using the Hand Held Control, press the "Raise" button and raise the Platform at least 12" from the ground.
- Move the Motor Selector Switch to the "Primary" position.
- Proceed with bleeding the cylinders as explained in steps A (1-6) as covered in the "Bleeding the Cylinders" chapter in the Owner's Manual and Installation Instructions.

TT000044.doc 1

Date: 11-8-2000 No. TT000050

Model: WDL/WDLBG RM

EO No. Ref 4066

SUBJECT: WDL/ WDLBG RM "new" pump and enclosure features with Power Kit Options.

New Features:

All Pump configurations

- Improved hydraulic fittings and hose fittings, instead of older-style pipe-thread fittings. The new JIC fittings and hose fittings provide improved sealing.
- Redesigned to use fewer fittings and hoses. This reduces the number of potential leak points.
- New bulkhead fittings now make it easier to connect the hoses by allowing the connections to be
 made on the outside of the hydraulic enclosure, rather than the inside where it is more awkward to
 maneuver.
- The hydraulic reservoir now features an easy-to-access drain port that allows the oil to be drained through the bottom of the hydraulic enclosure. It is no longer necessary to remove the pump from the enclosure in order to drain the oil.
- Now feature decals that identify key pump components for easier troubleshooting.

Dual Pump

• Now features a single electrical harness for easier maintenance and troubleshooting.

Single Pump or Single Pump with Hand Pump

• Now features two manual release knobs. The knobs allow the liftgate operator to open or lower the liftgate manually, in case of electrical failure.

Hand Pump Conversion Kit

• Now offer a new conversion kit that can be used to convert the single pump configuration liftgate to a single pump with auxiliary hand pump. The kit is easy to install with just a few bolts. This kit is not available on older pumps.

Hydraulic Enclosures

• Have been redesigned to make it easier to gain access to the pump by simply pulling the cover off. This provides access to the pump from both the front and top.

NOTE:

The Power Kits listed in the following pages include all parts required to connect the WDL RM Hydraulics and Electrical Controls from the liftgate to the Hydraulic Pump in the Hydraulic Enclosure and also to connect to the vehicle power source.

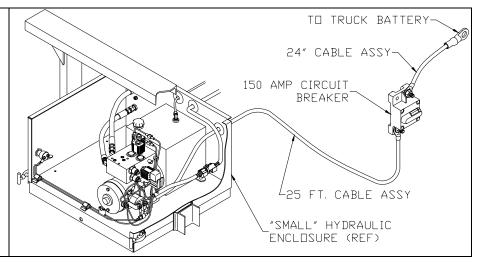

WDL/ WDLBG RM SERIES POWER OPTIONS (FOR TRUCKS)

DIRECT POWER KIT (80000884) FOR ALL PUMPS

with "Small" Hydraulic Enclosure", 22"w x 13"h x 20"d

Kit includes the following:

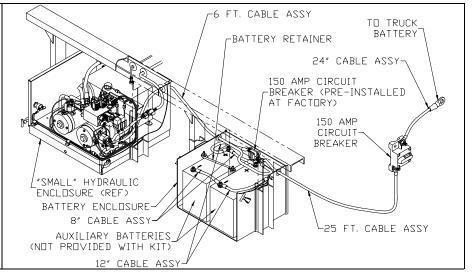

- One 25 ft. of 2 Ga. and one 24" 2 Ga. Battery Cable
- One 150 amp circuit breaker
- 5 ft. (Approx.) of hydraulic lines. Lines run from "Small Hydraulic Enclosure" to liftgate.

AUXILIARY BATTERY KIT (80000882) *FOR DUAL PUMP ONLY* with "Small" Hydraulic Enclosure, 22"w x 13"h x 20"d

Kit includes the following:

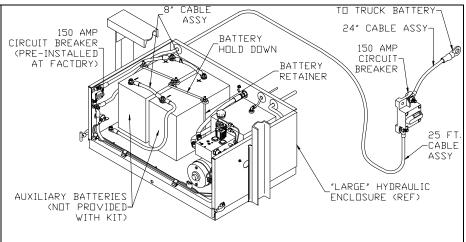

- Battery Enclosure, 17"w x 12"h x 14"d
- Two 8" 2 Ga., two 12" 2 Ga., one 24" 2 Ga., one 6 ft. 2 Ga., and 25 ft. 2 Ga. battery cables
- Two 150 amp circuit breaker
- Battery hold down brackets
- 5 ft. (Approx.) of hydraulic lines.
 Lines run from "Small"
 Hydraulic Enclosure to liftgate.

AUXILIARY BATTERY KIT (80000881) FOR SINGLE PUMP AND SINGLE PUMP WITH HAND PUMP with "Large" Hydraulic Enclosure, 32"w x 13"h x 20"d

Kit includes the following:

- Two 8" 2 Ga., one 24" 2 Ga., and one 25 ft. 2 Ga. battery cables
- One 150 amp circuit breaker
- Battery hold down brackets
- 5ft. (Approx.) of hydraulic lines. Lines run from "Large" Hydraulic Enclosure to liftgate.

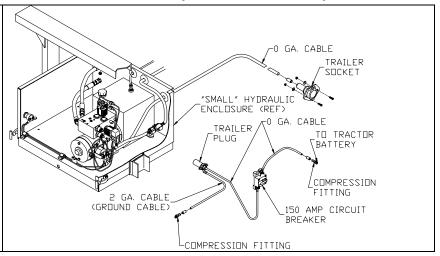

WDL/ WDLBG RM SERIES POWER OPTIONS (FOR TRAILERS)

DIRECT POWER KIT (80000883)

FOR ALL PUMPS with "Small" Hydraulic Enclosure, 22"w x 13"h x 20"d

Kit includes the following:

- One 64 ft. of 0 Ga., one 16 ft. of 0 Ga., and one 10 ft. of 2 Ga. battery cables
- One 150 amp circuit breaker
- Trailer Plug and Socket
- Wiring Harness Extension
- 31 ft. of hydraulic lines. Lines run from "Small" Hydraulic Enclosure to liftgate.

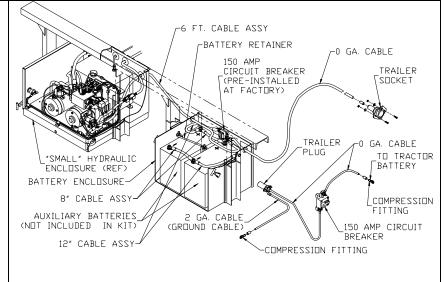

AUXILIARY BATTERY KIT (80000880) FOR DUAL PUMP ONLY

with "Small" Hydraulic Enclosure, 22"w x 13"h x 20"d

Kit includes the following:

- Battery Enclosure, 17"w x 12"h x 14"d
- Two 8" 2 Ga., two 12" 2 Ga., one 6 ft. 2 Ga., one 10 ft. 2 Ga., one 64 ft. 0 Ga., and one 16 ft. 0 Ga. battery cables
- Trailer Plug and Socket
- Two 150 amp circuit breaker
- Battery hold down brackets
- Wiring Harness Extension
- 31 ft. of hydraulic lines. Lines run from "Small" Hydraulic Enclosure to liftgate.

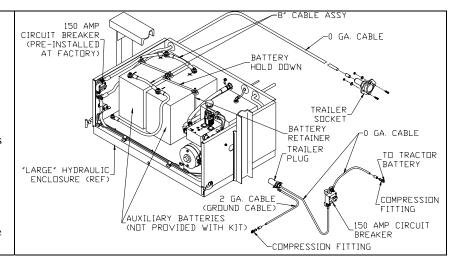

AUXILIARY BATTERY KIT (80000879) FOR SINGLE PUMP AND SINGLE PUMP WITH HAND

PUMP with "Large" Hydraulic Enclosure, 32" w x 13"h x 20"d

Kit includes the following:

- One 64 ft. 0 Ga., one 16 ft. 0 Ga., and one 10 ft. 2 Ga. battery cables
- One 150 amp circuit breaker
- Trailer Plug and Socket
- Battery hold down brackets
- Wiring Harness Extension
- 31 ft. of hydraulic lines. Lines run from "Large" Hydraulic Enclosure to liftgate.

Date: 03-02-2001 No. TT010063

Model: WDL RM/WDLBG RM

RGL/RBGL EO No: 4325

SUBJECT: WDL RM, WDLBG RM, RGL, RBGL Dual Pumps with Thermalpak™ w/ Voltage Guard™ wiring change and retro-fix

We have released an E.O. 4325 that address a problem we had with the interaction that occurs between the two (2) ThermalpakTM with Voltage GuardTM sensors on any WDL or RGL series liftgate equipped with a Dual Pump & Motor option.

The "Old" problem that occurred before this change:

When operating the liftgate with the Primary Pump unit, the Yellow Light on the Auxiliary Pump Motor will come on.

What has been done to correct the problem (This is released on E.O. 4325):

We have re-wired the red wire (power) on both the Primary and Auxiliary ThermalpakTM with Voltage GuardTM straight to the toggle switch. When the toggle switch is switched to the "Primary" position, the Auxiliary ThermalpakTM with Voltage GuardTM power is off. When the toggle switch is switched to the "Auxiliary" position, the Primary ThermalpakTM with Voltage GuardTM power is off.

IMPORTANT NOTE:

When switching between pumps you must wait at least 10-15 seconds between switching from one pump to the other and then back to the original setting (i.e. If you switch from Primary Pump to Auxiliary Pump, you must wait 10-15 seconds before switching back to the Primary Pump). If you do not wait 10-15 seconds before switching back and forth between pumps the sensor will trip on the pump you have switched to. If this occurs, simply flip the toggle switch back to the previous setting, wait 10-15 seconds then switch it back.

What is actually happening when the "Old" problem occurred:

To help understand what is happening, we need to step back a little and explain how the Voltage Guard Sensor works by itself. The Voltage sensor has two different thresholds (there is actually a third threshold, but it does not have any impact on the problem we are discussing) of low voltage which will trip the sensor and shut-off or disable the liftgate motor. The first is "running" voltage (the voltage the sensor reads when the liftgate motor is actually running), which is set to trip if voltage drops below 8.5 volts. The second is "standing" voltage (the voltage the sensor reads when the liftgate motor is not running), which is set to trip if voltage drops below 12 volts. **The batteries must always be charged back up to 13.3 volts to reset the sensor once it has tripped.**

Now, to explain why the sensor on the Auxiliary Motor trips when running the Primary Motor (or viceversa):

When the Primary pump is running, the sensor on the Primary motor is looking at "running" voltage and will allow the motor to keep running unless battery voltage drops below 8.5 volts. The Auxiliary Pump Sensor however, is looking at "standing" voltage because it is not running. Since they both share the same power source and since it is normal for a 12-volt battery system to drop below 12 volts when operating a liftgate, the sensor on the Auxiliary Motor will trip. The important thing to note however, is that although the light on the Auxiliary Motor's Voltage

Sensor will come on, the alarm will not sound and operation of the liftgate on the Primary Motor will not be interrupted in any way.

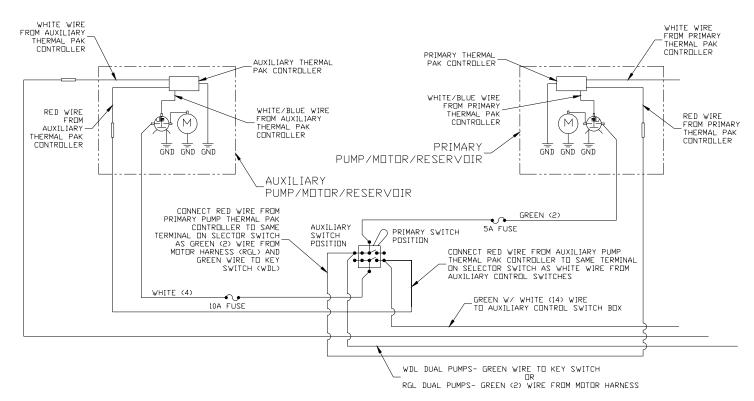

Now, once any of the voltage sensor trips (disables the motor), it is important to remember that the batteries must be recharged (by the vehicles charging system) to 13.3 volts before the sensor will reset itself.

Therefore, what should almost always occur, is that once you are done operating the liftgate and have started and run the vehicle for a period of time, the batteries will recharge to their normal level and the Auxiliary Motor sensor will automatically reset itself.

How to Re-Wire the Pump to eliminate the "Old" problem:

Re-wiring the ThermalpakTM with Voltage GuardTM as follows can eliminate the "Old" problem:

- 1. Disconnect Batteries.
- 2. Disconnect the Red Wire on each ThermalpakTM with Voltage GuardTM sensor.
- 3. Cut the "Ring terminal" of each Red Wire and splice on an extension wire (16 Ga. wire) long enough to reach to the "Selector" Switch (the toggle switch that switches the Primary Pump to the Auxiliary Pump).
- 4. Connect the wires to the appropriate terminals on the "Selector" Switch as shown in the wiring diagram below.
- 5. Re-connect Batteries.

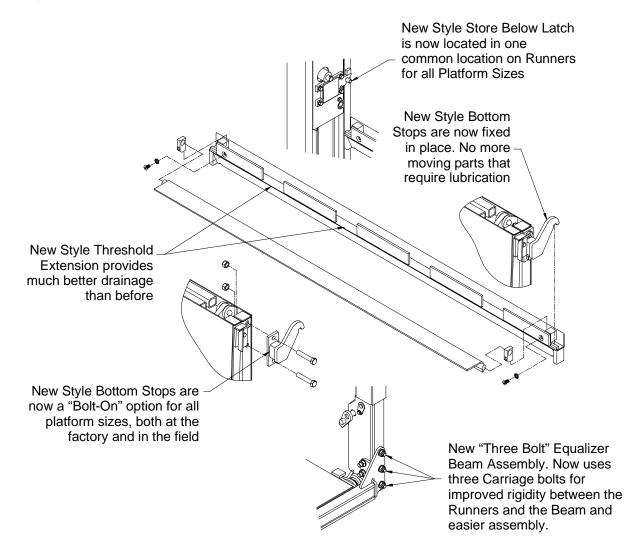

Date: 11-2-2001 No. TT010082 Model: WDL EO No. 4088

SUBJECT: New WDL RM Series Bottom Stops, Store Below, and Threshold Extension

We have released a new change to the WDL RM Series liftgate. This change releases new style Bottom Stop, Store Below, and Threshold Extension options. It also releases several miscellaneous product improvement changes to the WDL RM (and in the case of the Aluminum Ramps, the RGL as well). The change has been scheduled to go into effect on liftgates built on or after Jan. 11, 2002.

The New Bottom Stop and Store Below options are now line item kit options when ordering a WDL RM liftgate (All Zero Levels and 700 Assemblies specific to either Bottom Stops or Store Below are now obsolete).

1. Bottom Stops:

These have been completely redesigned to function much like the current RGL Series Bottom Stops. The Bottom Stops are now simple "Bolt-On" hooks with no moving parts that attach to the platform. All "H" frames built will be "Bottom Stop Ready" and all platforms built (except WDLBG) will have holes pre-drilled for attaching the new style Bottom Stop Hooks. The new Bottom Stops can be installed at the factory (kit # 80000973) or the field (kit # 80000974) on any liftgate that is built to the new design.

2. Threshold Extension/Crossbeams:

These have been redesigned to provide much better drainage and to be compatible with the New Style Bottom Stops.

3. Store Below Bed Option:

These have been redesigned to reduce the cost and simplify the design. The latch (located on the Runners) has been moved to a single common location for all platform sizes (used to be two different locations depending on platform size). The Store Below Option is now added by choosing from one of two factory only installed kits (80000975 for 60" BE Platforms and 80000976 for 60"+15" and 72" BE Platforms) when entering the order.

4. Equalizer Beams/Runners:

These have been redesigned to a "3 Bolt" design using Carriage bolts for the three bolts through the back side of the runners. This was done to improve rigidity between the Runners and Equalizer Beam to help reduce the amount of "Equalizer Beam Adjustments" that are often required in the field. Changing to the Carriage Bolts allows easier assembly/adjustment to the equalizer beam by not requiring a wrench to hold the bolt head when tightening these bolts.

5. 16" Aluminum/12" Steel Folding Ramps (Both WDL and RGL):

We have released new Retention Cables for all Aluminum and Steel Folding Ramps. The new cables are no longer welded to the platforms. They are now held to the platform with clevis pins. This allows the platforms to be powder coat painted without damaging the nylon cover on the cable when running the platforms through the baking ovens. It will also allow for simple replacement of cables that are damaged in the field.

6. Runner Cover Plates:

We have released new thinner runner cover plates (they were 3/16" thick, they are now going to be 1/8" thick) as a cost reduction.

The following pages detail all active WDL & WDLBG Zero Levels, 700 Assemblies and all standard options that now apply with the release of this change:

WDL RM STANDARD & OPTIONS OUTLINE

The following tables indicate the component groups used by the WDL RM liftgates. One each of the items marked with an (*) is required for a complete unit.

- Platform Support Linkage Group (Chain or Bar)

WDL Main Frame Ass'y, Parts

DESCRIPTION	
For 1 PC. Deck	31470201
For 2 PC. Deck	31470202

Note; A Main Frame Ass'y, Parts consist of the following major parts;

- Runner Ass'ys, Roller Ass'ys, Roller Pins, & Wear Pads
- Lift Cylinders, Pins, Flow Control Valves, Fluid Line Ass'ys, Hoses & Hydraulic Fittings
- Closer Cylinder, Pins, Hoses, Hose Guard, & Hydraulic Fittings
- Inner, Outer Closer & Street side Hubs & Deck Pins
- Transit Latches (parts)
- Control Switches, Wiring Harness & Inside Control Cable
- Misc. Hardware items to assemble the above.

Note: A Main Frame Assembly Parts consists of all of the parts required to assemble a WDL Main Frame Assembly Complete less the following:

- Platform Ass'y Complete
- Linkage Ass'y (Chain or Bar)
- Roller Guard Covers
- Δ All parts below this level are at the 85803XXX or 31XXXXXX level.

- Linkage Ass'y (Bar)
- Δ All parts below this level are at the 85803XXX or 31XXXXXX level.

Date: 11-2-2001 No. TT010083 Model: WDL EO No. 4088

SUBJECT: New WDL RM Series Bottom Stops, Store Below, and Threshold Extension

We have released a new change to the WDL RM Series liftgate. This change releases new style Bottom Stop, Store Below, and Threshold Extension options. It also releases several miscellaneous product improvement changes to the WDL RM (and in the case of the Aluminum Ramps, the RGL as well). The change has been scheduled to go into effect on liftgates built on or after Jan. 11, 2002. Please refer to Tech Tip TT010082 for a more detailed description of the change.

The following explains all service part replacement issues that will arise as a result of this change. Note that the following information applies only to Service Parts issues for Reduced Maintenance liftgates. For information on using any of these new parts and assemblies on Pre-RM WDL Liftgates please contact Engineering. This Tech Tip does not supercede Tech Tip TT990028.

For information regarding converting a liftgate from old style Bottom Stops and/or Threshold Extensions to the new style please contact the Engineering department.

EFFECT ON SERVICE PARTS:

A. New will work for old – no rework or additional parts required:

1. New Equalizer Beams (see below) can be used for old. The new third hole would not be used when putting a new beam onto an old liftgate.

New Part No.	Old Part No.	Description
31365001	85803386	Equalizer beam Assy, 96"
31465001	85803755	Equalizer beam Assy, 96" w/ Threshold Extension
32365001	85803301	Equalizer beam Assy, 102"
32465001	85803734	Equalizer beam Assy, 102" w/ Threshold Extension

2. New Platform Assemblies Complete can replace old Platforms without Bottom Stops as follows:

New Part No.	Old Part No.	Description
31410001	31410001	Platform Assy Complete, 60 x 80 BE
31410003	31410003	Platform Assy Complete, 72 x 80 BE
31410005	31410005	Platform Assy Complete, 60 x 80 + 15
31410007	31410007	Platform Assy Complete, 60 x 80 + 15 w/ CS
31410009	31410009	Platform Assy Complete, 72 x 80 + 15
31410011	31410011	Platform Assy Complete, 72 x 80 + 15 w/ CS
31410013	31410013	Platform Assy Complete, 86 x 80 BE

New Part No.	Old Part No.	Description	
32410001	32410001	Platform Assy Complete, 60 x 86 BE	
32410003	32410003	Platform Assy Complete, 72 x 86 BE	
32410005	32410005	Platform Assy Complete, 60 x 86 + 15	
32410007	32410007	Platform Assy Complete, 60 x 86 + 15 w/ CS	
32410009	32410009	Platform Assy Complete, 72 x 86 + 15	
32410011	32410011	Platform Assy Complete, 72 x 86 + 15 w/ CS	
32410013	32410013	Platform Assy Complete, 86 x 86 BE	

3. New Store Below Lock Bar Assemblies can be used for old.

New Part No.	Old Part No.	Description	
31457501	85803575	Store Below Lock Bar Assembly, Curb Side	
31457551	85803576	Store Below Lock Bar Assembly, Street Side	

B. New will work for old - no rework but additional parts are required:

1. Some New Runner Assemblies can replace old Runner Assemblies but new Equalizer Beam Bolts & Nuts ((2) 75087500 Carriage Bolts and (2) 75085199 Locknuts) must also be supplied for each runner.

New Part No.	Old Part No.	Description	
31230001	31230001	Runner Assy Complete, Curb Side, Bottled Gas	
31230051	31230051	Runner Assy Complete, Street Side, Bottled Gas	
31330001	31330001	Runner Assy Complete, Curb Side, 1 Piece Platforms	
31330051	31330051	Runner Assy Complete, Street Side, 1 Piece Platforms	
31430001	31430001	Runner Assy Complete, Curb Side, 2 Piece Platforms	
31430051	31430051	Runner Assy Complete, Street Side, 2 Piece Platforms	

C. New will work for old - but rework and additional parts are required:

1. New Platform Assemblies Complete can replace old Platforms with Bottom Stops but the old (now service) Bottom Stop Pin Assemblies (85803561) will have to be added to each side of the platform in order to work with old liftgates with old style bottom stops.

New Part No.	Old Part No.	Description	
31410001	31410002	Platform Assy Complete, 60 x 80 BE w/ Bottom Stops	
31410003	31410004	Platform Assy Complete, 72 x 80 BE w/ Bottom Stops	
31410005	31410006	Platform Assy Complete, 60 x 80 + 15 w/ Bottom Stops	
31410007	31410008	Platform Assy Complete, 60 x 80 + 15 w/ CS w/ Bottom Stops	
31410009	31410010	Platform Assy Complete, 72 x 80 + 15 w/ Bottom Stops	
31410011	31410012	Platform Assy Complete, 72 x 80 + 15 w/ CS w/ Bottom	

TT010083.doc PAGE 2

New Part No.	Old Part No.	Description
		Stops
31410013	31410014	Platform Assy Complete, 86 x 80 BE w/ Bottom Stops
32410001	32410002	Platform Assy Complete, 60 x 86 BE w/ Bottom Stops
32410003	32410004	Platform Assy Complete, 72 x 86 BE w/ Bottom Stops
32410005	32410006	Platform Assy Complete, 60 x 86 + 15 w/ Bottom Stops
32410007	32410008	Platform Assy Complete, 60 x 86 + 15 w/ CS w/ Bottom Stops
32410009	32410010	Platform Assy Complete, 72 x 86 + 15 w/ Bottom Stops
32410011	32410012	Platform Assy Complete, 72 x 86 + 15 w/ CS w/ Bottom Stops
32410013	32410014	Platform Assy Complete, 86 x 86 BE w/ Bottom Stops

2. Old Bottom Stop runners can be made from new two piece platform runners by adding part 85803564 to the runner as shown on the old service runner drawing.

New Part No.	Old Part No.	Description	
31430001	31530001	Runner Assy Complete, Curb Side, Bottled Gas	
31430051	31530051	Runner Assy Complete, Street Side, Bottled Gas	

- 3. New Style Bottom Stops and/or Threshold Extensions can be retrofitted onto existing liftgates, however it is very involved to do so. Contact Engineering for more information if this is necessary.
- 4. New Style Aluminum/Steel Folding Ramp retention cables (37419502) can be used for old if they include (2) 37419701, (1) 27310303, and (1) 75084053 for each cable and a copy of the appropriate Ramp Installation Drawing to provide welding and locating instructions.

D. New will not work for old:

- 1. New Store Below Lock housings (31457001) cannot be used for old liftgates.
- 2. New Store Below Runners (32430002 and 32430052) cannot be used for old.
- 3. New Store Below Runner Cover Plates (32437502 & 32437552) cannot be used for old.

E. Old will not work for new:

- 1. Old Bottom Stop components cannot be used for new.
- 2. Old Store Below Lock components cannot be used for new.

TT010083.doc PAGE 3

TECH TIPS

Doc. No: TT020112

Date: 11-4-2002

Model: WDL Series

Liftgate Model: WDL

Issue: Liftgate Platform does not raise and lower evenly

There are three primary reasons why a WDL Liftgate Platform will not raise (or lower) evenly when the Platform is empty (no load). They are:

- 1. The Equalizer Beam and Runners are misaligned
- 2. There is air in the Hydraulic System
- 3. The Flow Divider Valve is either out of adjustment or contaminated

Note: On new installations, before checking any of the above items, make certain that the Uprights are square to each other and to the vehicle.

Troubleshooting Guide:

Issue	Possible Cause	Correction
New or existing installation. Platform has never raised evenly. One side leaves the ground before the other.	Air in Hydraulic System.	Refer to "How to Bleed Air from the System" section in this document or in the Owner's Manual for the liftgate.
	Equalizer Beam and Runners are misaligned.	Refer to "How to Inspect for Misalignment between Runners and Uprights" section in this document.
New or existing installation. Platform has never raised evenly, but both sides leave the ground at the same time.	Improperly adjusted Flow Divider Valve (on liftgates equipped with an adjustable Flow Divider Valve).	Adjust Flow Divider Valve. Refer to "How to Adjust Flow Divider Valve" section of this document or in the Owner's Manual for the liftgate.
	Contamination in Flow Divider Valve.	Disassemble and clean valve or replace with new valve.
New or existing installation. Platform raises or lowers unevenly, but in an erratic manner. The liftgate may raise or lower on one side faster than the other during one cycle, and on the other side during the next cycle. Or, the liftgate may raise or lower evenly for some cycles, then go back to raising or lowering unevenly.	Contamination in Flow Divider Valve.	Disassemble and clean valve or replace with new valve.

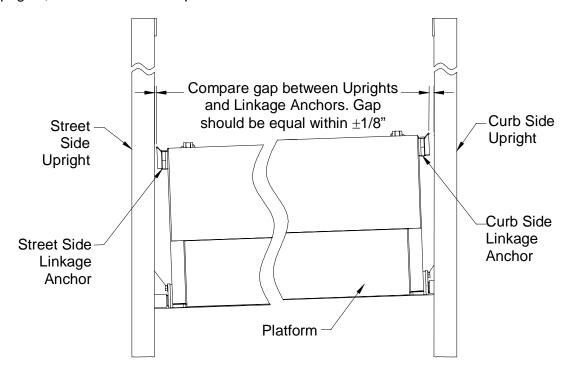

TT020112.doc Page 1 of 12

Issue	Possible Cause	Correction
Existing installation. Platform previously raised and lowered evenly. Now, one side leaves the ground before the other.	Equalizer Beam and Runners are misaligned.	Refer to "How to Inspect for Misalignment between Runners and Uprights" section in this document.
	Air in Hydraulic System.	Refer to "How to Bleed Air from the System" section in this document or in the Owner's Manual for the liftgate.
Existing installation. Platform previously raised and lowered evenly. Now, both sides leave the ground at the same time, but one side reaches bed level before the other.	Improperly adjusted Flow Divider Valve (on liftgates equipped with an adjustable Flow Divider Valve).	Adjust Flow Divider Valve. Refer to "How to Adjust Flow Divider Valve" section of this document or in the Owner's Manual for the liftgate.
	Contamination in Flow Divider Valve.	Disassemble and clean valve or replace with new valve.
Existing installation. Liftgate appears to bind or slow down as the Platform lowers. One side or the other appears to hang up as the Platform nears the ground.	The lower portion of one or both Uprights may be deformed as a result of repeated impact with loading docks. This causes the Runner Wear Pads to bind in the Uprights.	Refer to "How to Check for Proper Wear Pad Clearance" section of this document.

TT020112.doc Page 2 of 12

How to Inspect for Misalignment between Runners and Equalizer Beam:

- 1. Raise the Platform, in the open unfolded position, to bed level. Be sure both sides are resting fully against the Upstops. (It's okay if the platform does not raise evenly at this point. This will be resolved after all adjustments are made). Fold the platform to the transit position.
- 2. Visually inspect the distance between the Linkage Anchors on the sides of the Platform and the Uprights, as shown below. Inspect both the Street Side and Curb Side.

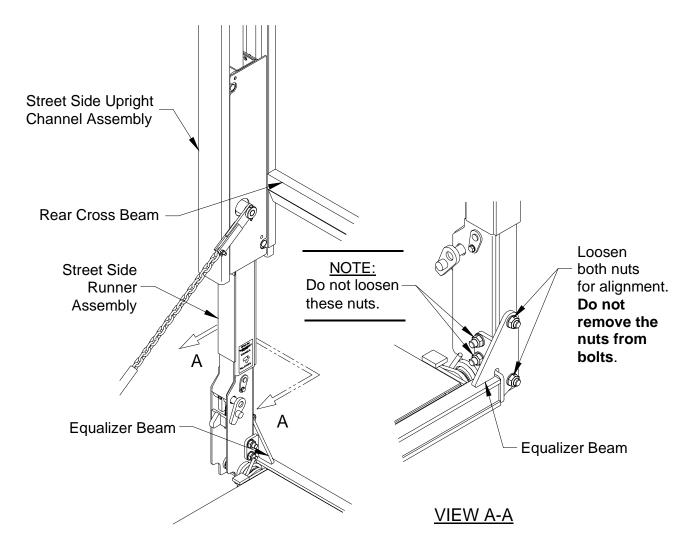

3. Compare the gap between the Uprights and the Linkage Anchors. If the gaps are equal to within 1/8" of each other, then no adjustment is required. If the gaps vary by more than 1/8", the Equalizer Beam will have to be realigned according to the procedures below. Make a note of which side (curb or street) has the larger gap between the Linkage Anchor and the Upright. This will be considered the "High Side" for the purpose of adjustment later in this document.

TT020112.doc Page 3 of 12

How to Prepare for Aligning the Runners to the Equalizer Beam:

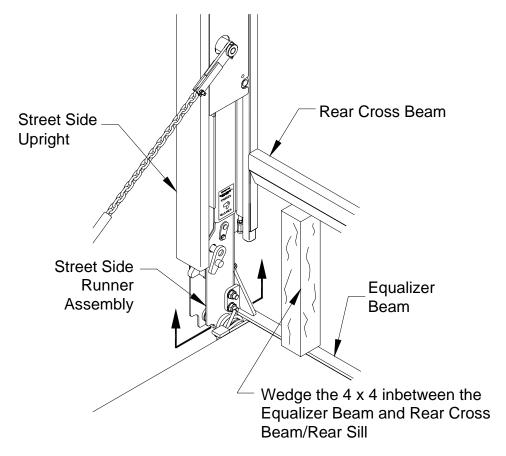

- 1. You will need a 4" x 4" piece of wood, or similar material, cut to 24"-30" long.
- 2. Loosen the bolts on the Street Side Runner:
 - **A.** Lower the Platform to the ground.
 - **B.** Loosen only the two (2) 3/4"-16 Locknuts on the Street Side Runner as shown below. **Do not remove the two (2) Locknuts from Bolts**.

TT020112.doc Page 4 of 12

How to Align the Runners Square to the Equalizer Beam:

1. Position the 4" x 4" in-between the Equalizer Beam and Rear Cross Beam/Rear Sill on the side of the liftgate that is the "High Side" (see "How to Inspect for Misalignment between Runners and Equalizer Beam", Step 3, earlier in this document) as close to the runner as possible. Raise the Platform until the 4" x 4" is wedged firmly into position as shown below. Continue to raise the curb side of the Platform approximately 2" to 3".

- 2. With the 4" x 4" firmly locked into place, torque the two (2) 3/4"-16 Locknuts on the Curb Side Runner to 190-200 ft-lb.
- **3.** Lower the Platform to remove the 4" x 4". Continue lowering the Platform to the ground until both sides hit ground.
- 3. Raise liftgate to bed level and fold platform. Examine gaps between Linkage Anchors and Uprights again as described in the "How to Inspect for Misalignment between Runners and Equalizer Beam" section of this document and repeat this adjustment as required until gaps are equal within 1/8".

TT020112.doc Page 5 of 12

How to Bleed air from the Hydraulic System:

Air in the Hydraulic System can cause the WDL Liftgate Platform to raise and lower unevenly. Air can leak into the Hydraulic System anytime the system undergoes maintenance, for instance when the pumps, cylinders or valves are replaced.

The WDL Series Liftgate has undergone several re-designs over the years. The procedures for bleeding air out of the Hydraulic System depend on which liftgate design you have. Refer to the appropriate section below for proper procedures based on the manufacture date of the liftgate.

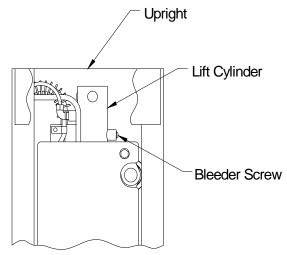

NEW INSTALLATIONS ONLY:

It is very important that the Hydraulic Hoses running from the pump to the liftgate be "primed" with oil prior to connecting them to the fittings at the bottom of the uprights. Not doing so will push the entire hose length's worth of air into the cylinders. If lines have not been primed, they should be disconnected at the bottom of the Uprights (with the liftgate on the ground) and "primed" as explained in the Installation Instructions chapter titled: "Connecting Hydraulic Lines to the Liftgate" before you attempt to bleed the system.

Bleeding procedures for WDL Liftgates built after October 1998:

WDL liftgates built on or after October 1998 must be bled according to the following procedures. If your liftgate was built before October 1998, refer to the bleeding procedures described in the previous section of this document.

- 1. With the Platform open, raise it to approximately 6" below bed level.
- 2. Starting with the street side Lift Cylinder, locate the Bleeder Port on the side of the Lift Cylinder near the top. With a 5/32" size Allen wrench, loosen the Bleeder Screw one to two turns. **DO NOT REMOVE THE BLEEDER SCREW FROM THE BLEEDER PORT**.
- 3. Rotate the Raise/Lower Switch upward to activate the pump unit and raise the Platform to bed level. Continue to hold the Switch up long enough to produce a clear, air-free, stream of oil from the Bleeder Port.
- **4.** Lower the Platform approximately 6" to allow easy access to the Bleeder Screw
- **5.** Tighten the Bleeder Screw.
- 6. Repeat steps 1 through 5 for the curbside Lift Cylinder.
- 7. After you have completed the bleeding procedure for both Lift Cylinders, operate the liftgate through several raise and lower cycles. The liftgate should operate smoothly and the Platform should travel evenly from the ground to the vehicle floor. If the platform is still raising or lowering unevenly, refer to the troubleshooting section of this document to determine the cause of the problem.

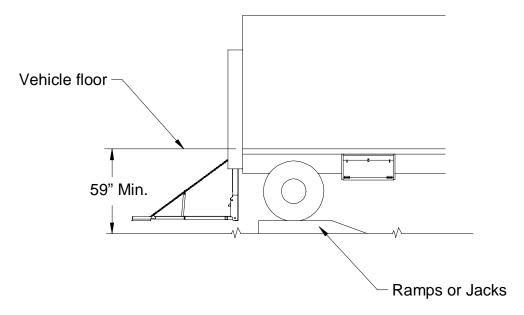

TT020112.doc Page 6 of 12

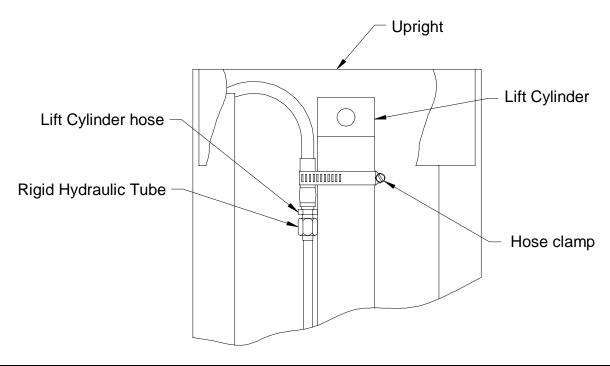

Bleeding procedures for WDL Liftgates built prior to October 1998:

WDL liftgates built prior to October 1998 must be bled according to the following procedures. If your liftgate was built on or after October 1998, refer to the bleeding procedures for those liftgates described in the next section of this document.

1. Using suitable ramps or jacks, elevate the rear of the vehicle so that the vehicle floor is at least 59" above the ground. Lower the Platform, in the open position, so that the Lift Cylinders are fully extended (see below).

2. Starting with the street side Lift Cylinder, loosen the Hose Clamp and disconnect the Lift Cylinder Hose from the rigid hydraulic tube attached to the side of the Lift Cylinder as shown below.

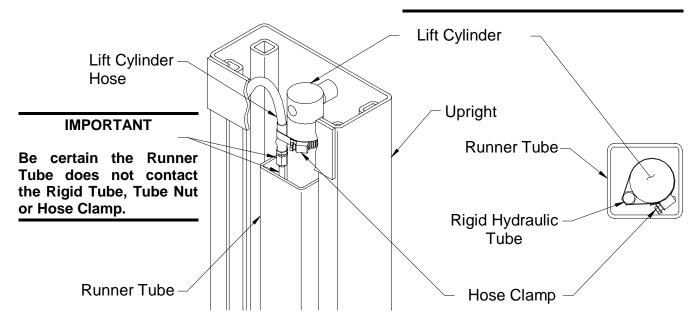

TT020112.doc Page 7 of 12

- **3.** Press the Raise Switch to activate the pump unit. Continue to press the Raise Switch just long enough to produce a clear, air-free, stream of oil from the hose.
- **4.** Reconnect the hose to the rigid Hydraulic Tube and tighten the Hose Clamp with the rigid hydraulic tube properly positioned to provide clearance to the inside of the Runner Tube as shown below.

IMPORTANT

Note the position of the Hose Clamp on the Hose Fitting as shown.

- 5. Repeat steps 2 thru 4 for the curbside Lift Cylinder.
- **6.** After you have completed the bleeding procedure for both Lift Cylinders, operate the liftgate through several raise and lower cycles. The liftgate should operate smoothly and the Platform should travel evenly from the ground to the vehicle floor. If the platform is still raising or lowering unevenly, refer to the troubleshooting section of this document to determine the cause of the problem.

TT020112.doc Page 8 of 12

WDL Flow Divider Valve:

All WDL liftgates are equipped with a Pressure Compensated Flow Divider Valve. The purpose of this valve is to keep the platform level when raising or lowering the liftgate with an off center load. All WDL liftgates built prior to 10/01 are equipped with an Adjustable Flow Divider Valve. Liftgates built after 10/01 (or liftgates that have had the valve replaced since 10/01) are equipped with an improved design Non-Adjustable Valve. This new valve is fully compatible with older liftgates and will be sent to anyone ordering a replacement valve for their liftgates.

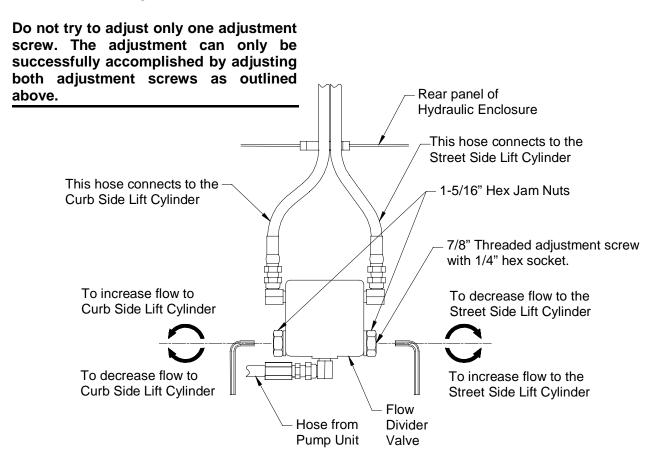

How to Adjust the Flow Divider Valve (For liftgates equipped with an adjustable valve – Built prior to 10/01):

If, when raising or lowering, the Platform is uneven with the ground or the floor of the vehicle (one side of the platform is higher than the other), the pressure-compensated Flow Divider Valve may have to be adjusted. This valve (located on the inside top of the Hydraulic Enclosure) is preset at the factory and should not require further adjustment at the time of installation. If adjustment is required, and only after the cylinders have been bled of all air (refer to "Bleeding the Cylinders" Section of this document), follow these procedures:

- 1. Observe and make note of which side of the platform raises first.
- 2. Find the two (2) 1-5/16" Hex Jam Nuts located on the right and left sides of the Flow Divider Valve. Unscrew both of the Jam Nuts approximately two (2) full turns.
- 3. Using a 1/4" size allen wrench, rotate the adjustment screw clockwise 1/8 turn on the side of the valve which controls the cylinder, on the side of the liftgate where the Platform is higher (raises first). (NOTE: The right side adjustment screw controls the street side cylinder and the left adjustment screw controls the curb side cylinder). Also, rotate the opposite side adjustment screw counterclockwise 1/8 turn.
- **4.** After each time that you adjust the Flow Divider Valve, fully cycle the Platform several times from the ground to bed level, each time stopping and continuing to hold against the Upstops for several seconds.
- **5.** Repeat this process in 1/8 turn or smaller increments, until the Platform is even and parallel to the ground and the floor of the vehicle when as it is being raised.
- 6. Tighten the Jam Nuts after you have completed the adjustment procedures.

TT020112.doc Page 9 of 12

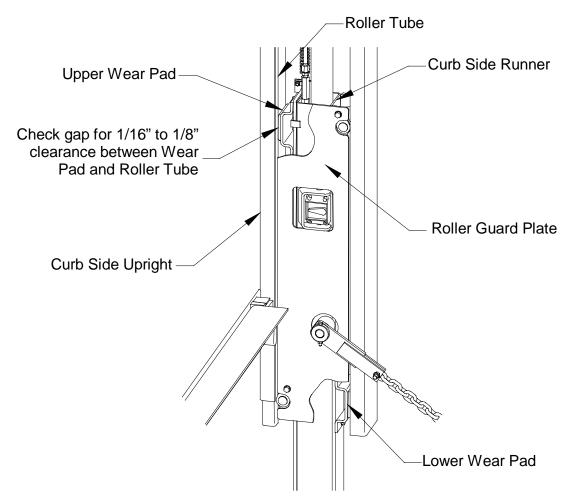

IMPORTANT

TT020112.doc Page 10 of 12

How to Check for Proper Wear Pad Clearance:

- 1. Open the Platform and lower it to 6" above the ground.
- 2. Starting with the curb side of the liftgate, locate the curb side Upper and Lower Wear Pads. (Refer to diagram below).
- **3.** Visually inspect to see that a gap exists between the Upper and Lower Wear Pads and the Roller Tubes in the Upright Channel as shown below.
- **4.** First inspect the gap with the Platform raised 6" above the ground. Then inspect the gap with the Platform halfway up to bed level. Finally, inspect the gap with the Platform near bed level.
- 5. If the Wear Pads are coming into contact with the Roller Tubes, or the gap is more than 1/8" at any of the three (3) positions inspected, the condition should be corrected by either adding shims to reduce the gap or by increasing the gap using a hydraulic jack or equivalent.

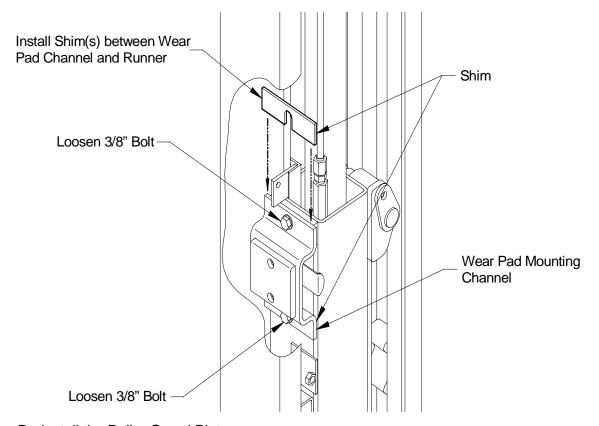

6. The minimum allowable spacing between the Roller Tubes is 8-1/2". If the gap is less than this amount, the Uprights will have to be straightened using a hydraulic jack or equivalent device to increase the gap between the Roller Tubes to the minimum 8-1/2" dimension. Contact WALTCO at 330-633-9191 if you have any questions about how to straighten the Uprights.

TT020112.doc Page 11 of 12

How to Install Shims to the Wear Pads:

- 1. Lower the Platform to approximately 6" above the ground and remove the Roller Guard Plate from each Runner that requires Shims.
- 2. Use the smallest gap that was measured of the three (3) positions, to determine the amount of shimming required.
- 3. Use the appropriate Shim(s) to reduce the gap to between 1/16" and 1/8". If more than 3/16" of shimming is required, contact WALTCO at (330) 633-9191 for further information.
- **4.** Loosen the two (2) 3/8" bolts of the Wear Pad Mounting Channel to install shims, then tighten the bolts.

5. Re-install the Roller Guard Plate.

Date: 11/22/02 No. 020115 Model: WDL, ACL EO No. 4913, 4925, 4923

We have created non-SP Light Kits for the WDL and ACL, both Factory-installed and Field-installed.

The new LED's used in our kits are very similar in size to the existing 6" oval incandescents, and can installed in the same rubber grommets. Their plugs are not interchangeable, but otherwise wiring is identical. Anti-theft rings are an SP option for the 80000985, -6, -7, and -8 kits.

80000985 WDL LED Light Kit, Truck, Factory Installed, grommet mounted.

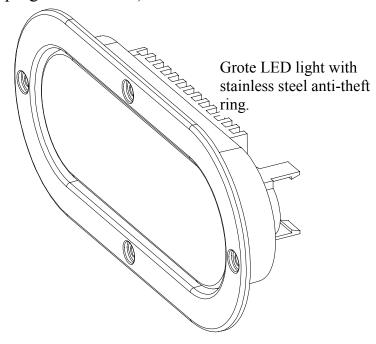

80000986 WDL LED Light Kit, Trailer, Factory Installed, grommet mounted.

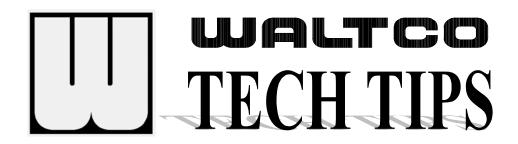

80000987 WDL LED Light Kit, Truck, Field Installed, grommet mounted.

80000988 WDL LED Light Kit, Trailer, Field Installed, grommet mounted.

80000989 ACL LED Side Light Kit, grommet mounted.

WDL Grote LED Light Kit, Truck and Trailer, Factory Installed, Stainless Steel Anti-Theft Ring. (This Kit was created for Ryder and does not include back-up lights for trucks)

Date: 03-28-03 No. TT030121

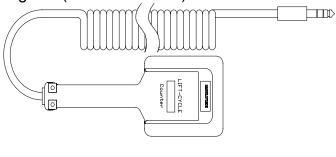

Model: WDL, RGL,F,C,E

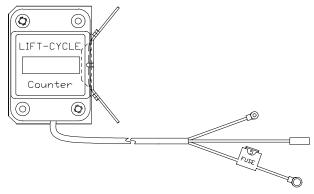

EO No. 5021

SUBJECT: New Cycle Counter for WDL, RGL, F, C AND E

Engineering has released the new Cycle Counter as a standard option for the WDL, RGL, F, C and E with single pumps. This can be provided as a field retrofit kit or factory installed option. This cycle counter must utilize the new generation Thermalpak with Voltage Guard in order to record cycles (the new generation controlers are white). Additional liftgate models and dual pump options can be provided as a custom request.

There are two styles of digital readouts. One is a permanent mount which employs one digital readout per liftgate. The other is a hand held unit which employs one data port per liftgate. The data port option allows one digital readout (hand held) to be used for multiple liftgates (useful for a fleet).

Hand Held Cycle Counter (10099450)

Permanent Mount Cycle Counter

All the recording information is contained in the Controller unit. If the cycle counter is added as a retrofit kit, the cycles displayed will be current from the time the **New Generation** controller unit was put into service. If the pump unit has an old generation controller unit, it will need to be replaced with a new generation unit and the cycle count will start at zero. Upon request the controller can be programmed to display hours of run time in addition to liftgate cycles.

The following kits were released:

80001006 Cycle Counter Kit, permanent mount for new generation controller

80001007 Cycle Counter Kit, data port only for new generation controller (part # 10099450 Hand held reader needed for reading data)

80001008 Cycle Counter Kit, permanent mount, retrofit new generation controller included

80001009 Cycle Counter Kit, data port only, retrofit new generation controller included (part # 10099450 Hand held reader needed for reading data)

10099450 Hand Held Cycle Counter

NOTE: One cycle is equivalent to 5 or more seconds of motor run time per activation.

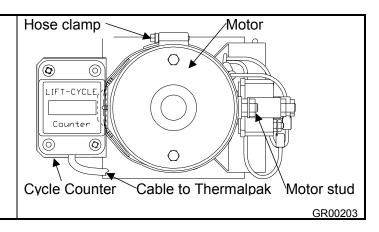

The following instructions (80101342) are sent out with each kit showing how to wire the cycle counter and mount the hardware:

CYCLE COUNTER MOUNTING

Attach cycle counter to end of motor using hose clamp provided.

Be certain not to touch Motor stud with hose clamp or bracket.

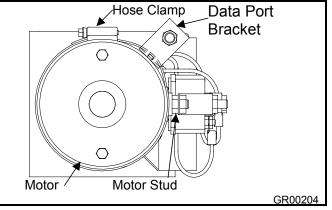

When counter is placed on opposite side of motor, remove counter from bracket and reassemble facing upright.

DATA PORT MOUNTING FOR HAND HELD CYCLE COUNTER

Attach Data Port Bracket to end of motor using hose clamp provided.

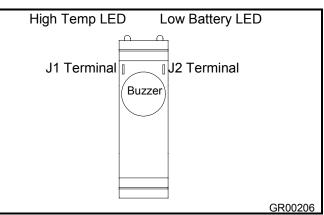

Be certain not to touch Motor stud with hose clamp or Bracket.

PRE-WIRING OF THERMALPAK UNITS NOT EQUIPPED WITH CYCLE COUNTER PLUG.

For Thermalpak units having additional wire with cycle counter plug, proceed to next step.

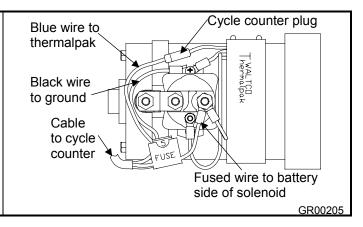

Units not having cycle counter plug, remove Thermalpak and install supplied jumper wire to J2 terminal on back of unit. Thread jumper out with remaining wires and reinstall Thermalpak.

WIRING CYCLE COUNTER/DATA PORT INTO PUMP UNIT

Connect wires to Thermalpak, ground, and solenoid as shown.

Place operation decal in a conspicuous location near the cycle counter.

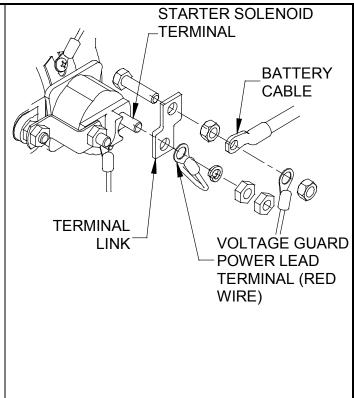

Date: 8-22-03 No. TT030139

Model: All EO No. NA

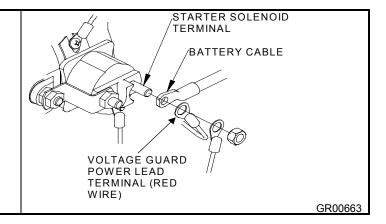

SUBJECT: Voltage Guard Connections

- If you encounter these symptoms in your controls:
 Motor won't run when Raise or Close switches are
 actuated, unless Voltage Guard is bypassed. No
 alarm from Voltage Guard. Before you assume that
 the Voltage Guard is defective, try this simple fix:
- WDL, RGL, OR WSL VERSION
- Disconnect Battery Cable, and swap the Power Lead to be <u>above</u> the Terminal Link, as shown.
 Replace Lock Washer and Nuts. Tighten Nut and Jam Nut to 8 foot-pounds.
- Reconnect Battery Cable, tighten to 25 foot-pounds.
 Use back-up wrench so that Terminal Link does not get moved.
- Retest controls. If still not working, Voltage Guard may be malfunctioning.
- How this works: When the ring terminal on the Power Lead is <u>under</u> the copper Terminal Link, or Battery Cable, it may shift or deform, allowing the connection to get loose. This can lead to a loss of electrical power to the Voltage Guard, which quits working. Putting the Power Lead Terminal on top of the Terminal Link or Battery Cable gives a large, flat surface, for a more secure connection.

ALL OTHER LIFTGATES

- ✓ Disconnect Battery Cable
- ✓ Swap the Power Lead(s) to be <u>above</u> the Battery Cable, as shown. Replace Nut. Tighten Nut to 8 foot-pounds.
- Retest controls. If still not working, Voltage Guard may be malfunctioning.

Lubrication of Reduced Maintenance Bushings

There has been information circulating that lubricants should not be used on the reduced maintenance bushings that Waltco utilizes. This includes both Hydrocarbon lubricants (conventional petroleum based products), and less common Fluorocarbon lubricants. Lubricants <u>can</u> be used with our bushings but an understanding of the advantages and disadvantages is needed.

Lubrication is inherent within the bushings we use and will not dry out. The bushings are impregnated with Teflon that transfers to the pin under load. External lubricants are filled with additives that provide the lubricity. The most common filler is Molybdenum Disulfide, which is commonly referred to as "Moly". These additives can be microscopic hard particles that roll around between the pin and our bearing liner. This can under some conditions add to premature wear as opposed to adding no grease at all. There are times when grease is the culprit instead of the cure.

Neither the Hydrocarbon nor Fluorocarbon grease material would chemically under most conditions, be a problem for our bushings since our liner is very, very resistant to about all forms of chemical degradation and attack.

Although there is a science to grease, all the analytical work and theory goes out the window when grease is used in the field. The common tendency is to use what is cheap and on hand. This is the reason Waltco reduced maintenance bushings do not have grease fittings that allow just anything to be pumped into the bushing.

The disadvantage in applying an external lubricant is that over time, contaminates could migrate into the bushing creating an abrasive paste. Without the means to purge the old grease, heavy abrasives in the old grease could increase wear in the bushing. Our bushing is designed to handle some abrasives by imbedding them into the fiber lining to keep them away from the pin, but a clean lubricant will achieve the best results.

Once a bearing is greased with a quality lubricant, it can in some cases increase the performance of the bearing up to eight times as long as it is maintained with regular intervals of grease. In other words a non-reduced maintenance application, but possible longer life. This could be helpful in northern climates where salt and other de-icing

solutions are applied to roads. These contaminates can migrate into the bushing reducing the lubrication qualities.

For higher performance, a premium grease such as SuperLube Synthetic Grease with Syncolon (PTFE) from McMaster Carr as part number 1378K33, or a number of DuPont Krytox products are available.

There are two choices that would work best for those end users that have a severe application where a lubricant can increase their bushing life. They can request an SP application where we can design pins that can be drilled for grease fittings. Or they can apply an anti-seize compound such as "Molypaste" to the pins. This usually lasts for long periods of time and resists penetration of road wash. An anti-seize compound containing metal oxides should not be used as they contain abrasives that can wear away at the bushing liner.

In either case the end user should be aware of proper lubrication methods to avoid getting the opposite effect they are trying to achieve.
